
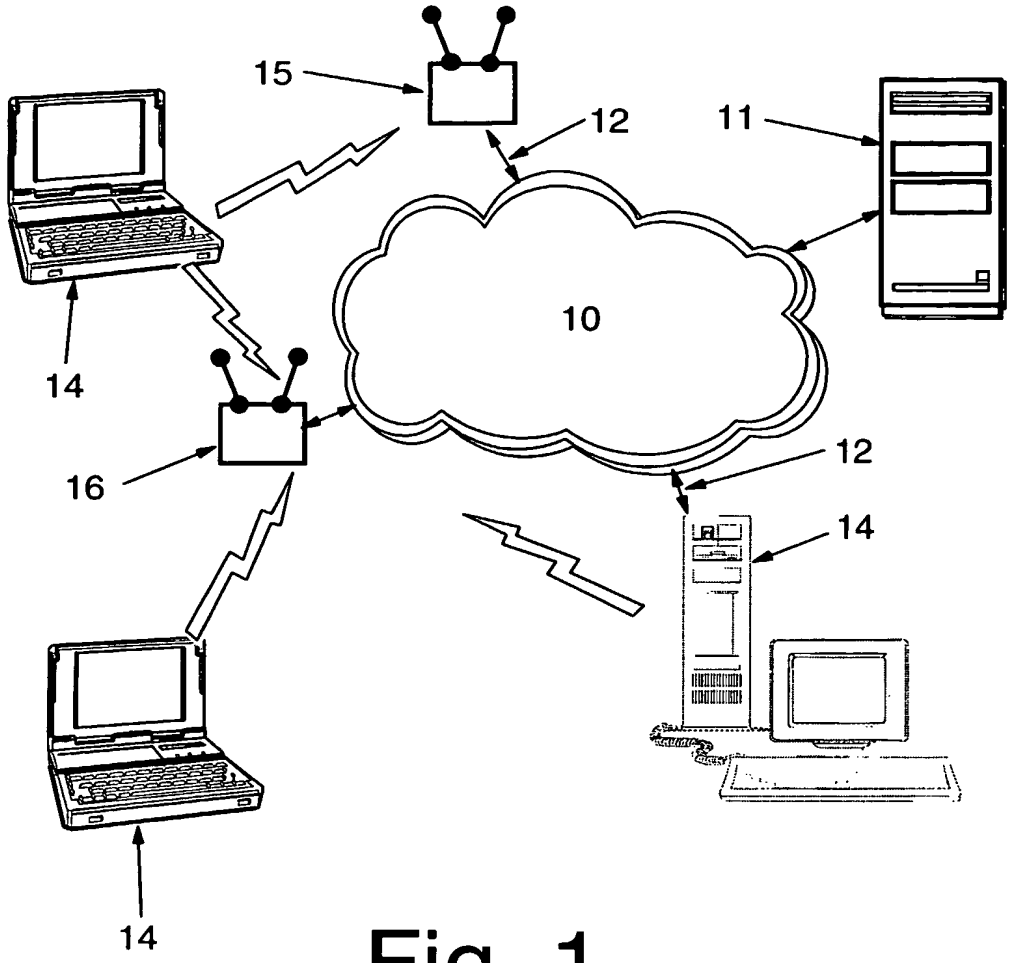

Fig. 1

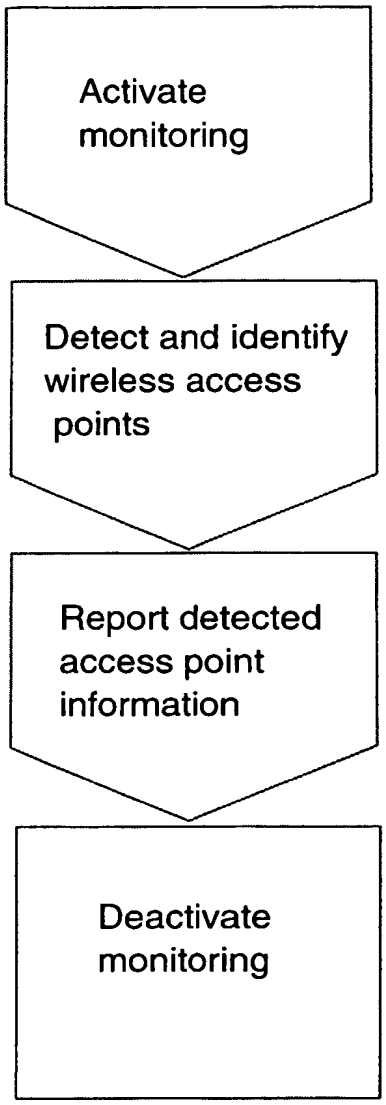

Activate monitoring
Detect and identify wireless access points
Report detected access point information
Deactivate monitoring

Fig. 2

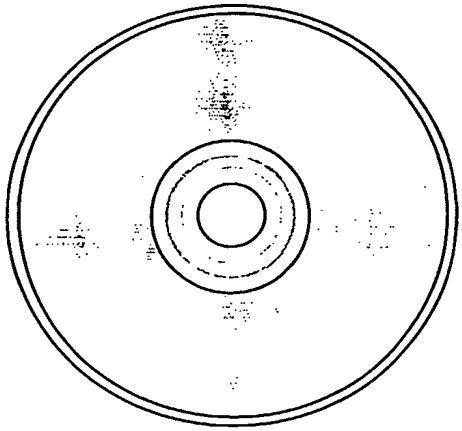

Fig. 7

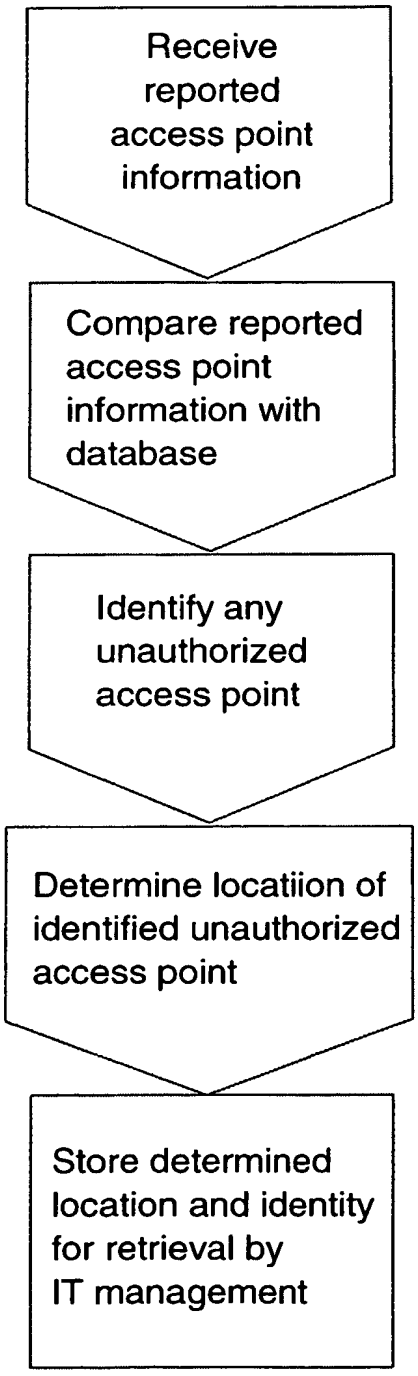

Receive reported access point information
Compare reported access point information with database
Identify any unauthorized access point
Determine locatiion of identified unauthorized access point
Store determined location and identity for retrieval by IT management

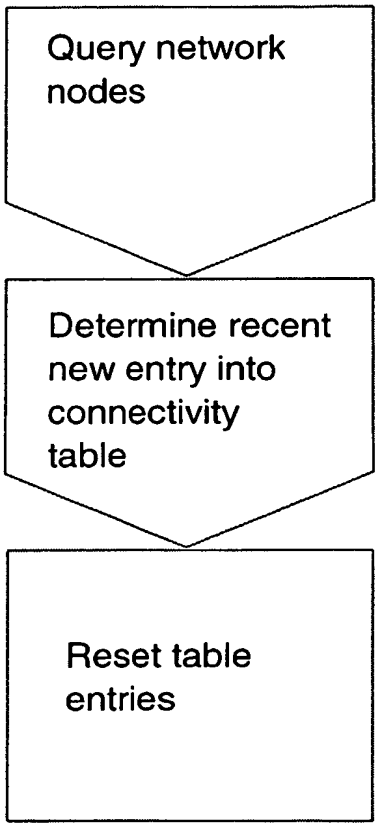
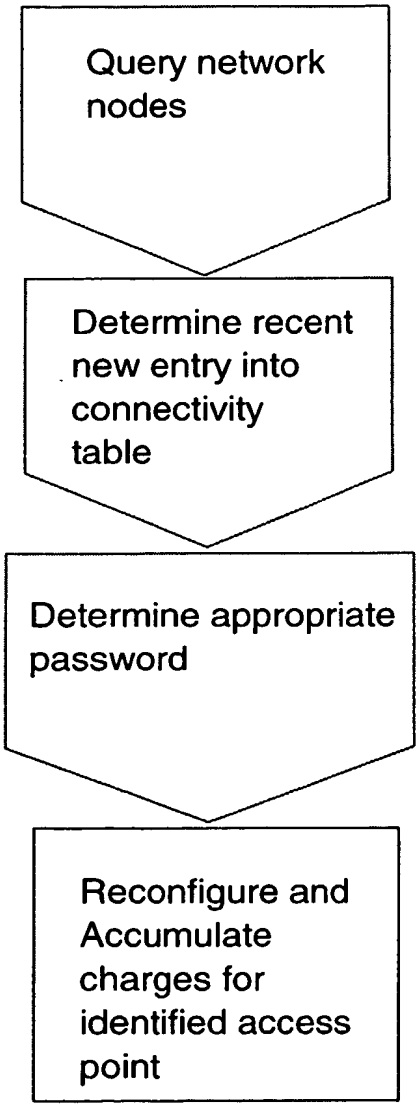
Fig. 4



Query network nodes
Determine recent new entry into connectivity table
Reset table entries

Fig. 5



Query network nodes
Determine recent new entry into connectivity table
Determine appropriate password
Reconfigure and Accumulate charges for identified access point
